

DAL SAPERE AL SAPER FARE

Immediate Loading Techniques According to the Italian School

Course duration: one day and one morning

General Description

Concepts, fundamentals and techniques of immediate loading according to the Italian School in particularly difficult situations.

The teaching will take place by presenting application tables based on the technical and clinical experience of more than 40 years, to intervene in the following cases:

- narrow crests, with thicknesses smaller than 3 mm
- placements out of the crest
- head translation
- blocked screws
- broken screws
- mobile implants
- painful implants.
- Video of a demonstration surgery: the participants will watch an advanced implantology surgery to consolidate their theoretical learning by viewing practical applications of the surgical technique immediately after their theoretical learning.
- Surgical technique: practice. After the theory and the video demonstration, practice will be performed on models.
- Theory and practice of immediate bracing by welding titanium bars to implants.
- How to use the intraoral welder to salvage a mobile implant.
- Final debate and distribution of attendance certificates.
